

ABSTRACT

The present invention provides an expandable and collapsible table for use with a miter saw or for recreational use. A support structure includes a truss
5 that is expandable and collapsible in the horizontal direction. A pair of expansion leaves are pivotally connected to opposing sides of the support structure. A support arm and extension arm work in combination with a locking mechanism to maintain the expansion leaves in the
10 horizontal position or alternatively to allow the expansion leaves to collapse to a vertical position.
